

THOMAS POROWSKI

Systems & Automation Engineer · Identity & Access Management

Glenside, PA · tporowski17@gmail.com · linkedin.com/in/tommy-porowski · tporowski.github.io

SUMMARY

Systems administrator and automation engineer with three years of production experience in a 1,000+ endpoint environment. Build identity lifecycle automation, SaaS integrations, and internal tooling in Python, PowerShell, and React, with a documented record of measurable cost and labor savings. Dual B.S. in Mathematics and Computer Science, May 2027.

EXPERIENCE

Arcadia University — Glenside, PA

Junior System Administrator

May 2025 – Present

- **Designed and built a custom joiner-leaver identity automation** that polls Zendesk for HR onboarding and offboarding tickets, provisions and modifies Active Directory identities, manages Google Workspace accounts via GAM7, notifies managers, and generates routed child tickets for hardware and software requests — replacing roughly five hours of manual account creation per onboarding cycle with a five-click process.
- Added **time-bound offboarding data retention**: departing employees' Drive data is relocated to a shared drive with delegated manager access that auto-revokes on expiry via scheduled task, eliminating manual cleanup and standing access to departed accounts.
- **Chose polling over webhooks** rather than expose an inbound endpoint on a directory-privileged host; enforced idempotency through ticket state, with heartbeat monitoring for failure detection.
- Built a **Zendesk sidebar application** (ZAF client, Microsoft OAuth, Graph API) surfacing requester device data directly in tickets and writing it to internal notes for tracking — **avoiding roughly \$9,000/year** in Zendesk asset management licensing and removing agent tab-switching.
- Automated an enterprise purchase-approval routing workflow, removing five manual handoffs from the approval chain and saving an estimated **\$50,000/year** in staff hours.
- Led a **cross-departmental Zendesk consolidation** with every team under IT: reduced user-facing forms from 22 to 7 and cut forms, fields, triggers, views, automations, and macros by ~50% tenant-wide without losing required functionality.
- Configured Intune scope tags and delegated groups letting international campus administrators manage their own devices and enterprise-licensed apps without tenant-wide permissions, removing IT as a middleman; migrated the full application catalog from on-premises PatchMyPC to cloud.
- Manage **1,000+ endpoints** across faculty/staff, student labs, and international departments using Microsoft Intune and Entra, ensuring device compliance and policy enforcement; monitor 200+ software deployments for vulnerabilities and deprecation.
- Built and operate a suite of scheduled automations in Python and PowerShell: DNS zone backup and export, BitLocker key tracking with automated remediation across all enterprise devices, Zendesk customer profile sync from the staff/faculty dataset, and HavelBeenPwned breach monitoring with notification workflows — each writing success/failure audit records back to Zendesk for run tracking.
- Wrote a USB-executable, idempotent Autopilot enrollment script (PowerShell, Microsoft Graph, Entra app registrations) that reduced device recovery and tracking to a three-step process from a previously unstructured one.

Helpdesk / IT Student Representative

Aug 2023 – May 2025

- Provided 24/7 on-call IT support for residential network, internet, and device setup issues; maintained campus print infrastructure.

PERSONAL PROJECTS

TidyConfig — Zendesk Configuration Management App

React, Python, Zendesk API, ZCLI

- Parses a full Zendesk tenant configuration, builds a dependency graph of every object relationship, and generates prioritized recommendations for reducing complexity. Migrates field and form data between objects so forms and fields can be retired without data loss, with cascading deletion of objects that would otherwise be orphaned. In preparation for publication on the Zendesk Marketplace.

EDUCATION

Arcadia University — B.S. Mathematics & B.S. Computer Science

Aug 2023 – May 2027

GPA 3.65. Relevant coursework: Graph Theory, Theory of Computation, Operating Systems, Computer Architecture, Deep Learning.

TECHNICAL SKILLS

Languages & Frameworks: Python (FastAPI, Flask, Quart, Django), PowerShell, JavaScript/React, Node.js, Bash, Java, R, HTML/CSS, Terraform (HCL)

Identity & Security: SSO/SAML federation, Microsoft OAuth (delegated & client credentials), gMSA, Entra App Registrations, RBAC, Conditional Access, MFA/2FA, network segmentation

Cloud & Infrastructure: Microsoft Intune, Entra, M365, Active Directory, Google Workspace (GAM7), Azure, AWS, Docker, GitHub Actions, CI/CD, VMware

Platforms & Networking: Zendesk (API, ZAF, ZCLI), Microsoft Graph, PowerShell Universal, Git, SentinelOne, GoPhish, Meraki, Cloudflare, DNS, DHCP, VLANs, SMTP
